

TOTAL HYDRAULIC SEAL COMPONENTS

BONDED SEALS

Our ability to offer 2 types of bonded or hybrid seals in the S11 style (standard) or the S50 (self centering) can enhance your high and low pressure applications.

We offer NBR and FKM rubber bonded to either your choice of carbon steel with a zinc plating or stainless steel (304, 316 grades).

Bonded seals can replace traditional washers in many hydraulic and pneumatic applications. For a complete list of sizes and thread guides contact us.
